

RESILIENT POINT™

Cyber Security & Intelligence Solutions

Secure Wireless Cyber Security Big Data Solutions

ENTERPRISE SECURE MOBILITY

Resilient Point designed, built, piloted, and deployed the Agency's certified/accredited COTS Suite B Enterprise Wireless Solution.

- 📶 We are fully integrated with the Information Assurance Directorate (IAD) in the certification and accreditation (C&A) process.
- 📶 Our layered approach using COTS encryption rates provides Type I standards at 5 -10X the speed of current secure wireless solutions.
- 📶 Our solution provides Suite B cryptography to protect classified data.

Layered solutions are the backbone of our secure mobile approach. Layers of commercial encryption, layers of authentication and authorization, boundary protection, appropriate hardening of devices and appropriate physical security measures all contribute to the overall security. In order to ensure interoperability, our solution relies on COTS equipment, open standards/protocols, and avoids proprietary hardware and software requirements. Sensitive data is protected by means of multiple layers of approved commercial cryptography as well as incorporated data-at-rest protection measures for sensitive information on the devices.

Resilient Point is a Service Disabled Veteran Owned Small Business (SDVOSB) with 20+ years of corporate and government experience.
